Region North

North: topic 1 — service quality

In the north region the service desk handled requests across the year. Paragraph 1 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the north region the service desk handled requests across the year. Paragraph 2 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the north region the service desk handled requests across the year. Paragraph 3 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

North: topic 2 — service quality

In the north region the service desk handled requests across the year. Paragraph 1 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the north region the service desk handled requests across the year. Paragraph 2 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the north region the service desk handled requests across the year. Paragraph 3 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

North: topic 3 — service quality

In the north region the service desk handled requests across the year. Paragraph 1 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the north region the service desk handled requests across the year. Paragraph 2 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the north region the service desk handled requests across the year. Paragraph 3 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

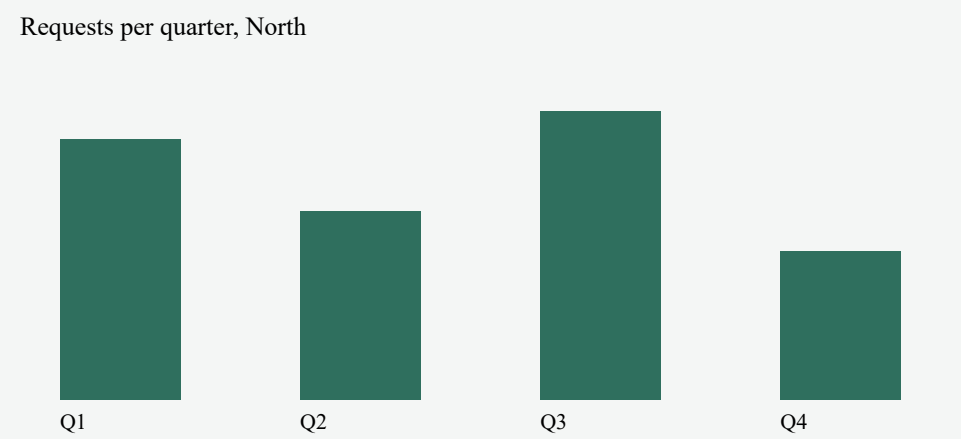

Figure 1. Requests per quarter, North region.

Table 1. Quarterly requests and median response time, North region

Quarter	Requests	Median response (hours)	Resolved on first contact
Q1	810	6	89%
Q2	590	7	78%
Q3	900	22	58%
Q4	460	20	68%

> See the methodology for how requests were counted, and the public guidance at W3C WCAG overview.

Region South

South: topic 1 — service quality

In the south region the service desk handled requests across the year. Paragraph 1 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the south region the service desk handled requests across the year. Paragraph 2 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the south region the service desk handled requests across the year. Paragraph 3 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

South: topic 2 — service quality

In the south region the service desk handled requests across the year. Paragraph 1 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the south region the service desk handled requests across the year. Paragraph 2 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the south region the service desk handled requests across the year. Paragraph 3 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

South: topic 3 — service quality

In the south region the service desk handled requests across the year. Paragraph 1 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the south region the service desk handled requests across the year. Paragraph 2 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the south region the service desk handled requests across the year. Paragraph 3 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

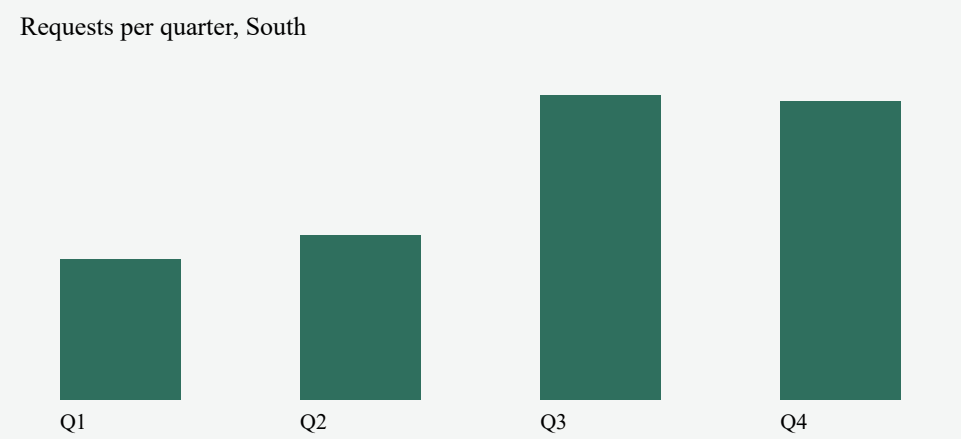

Figure 2. Requests per quarter, South region.

Table 2. Quarterly requests and median response time, South region

Quarter	Requests	Median response (hours)	Resolved on first contact
Q1	440	6	70%
Q2	510	6	90%
Q3	950	17	58%
Q4	930	30	91%

> See the methodology for how requests were counted, and the public guidance at W3C WCAG overview.

Region East

East: topic 1 — service quality

In the east region the service desk handled requests across the year. Paragraph 1 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the east region the service desk handled requests across the year. Paragraph 2 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the east region the service desk handled requests across the year. Paragraph 3 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

East: topic 2 — service quality

In the east region the service desk handled requests across the year. Paragraph 1 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the east region the service desk handled requests across the year. Paragraph 2 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the east region the service desk handled requests across the year. Paragraph 3 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

East: topic 3 — service quality

In the east region the service desk handled requests across the year. Paragraph 1 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the east region the service desk handled requests across the year. Paragraph 2 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the east region the service desk handled requests across the year. Paragraph 3 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

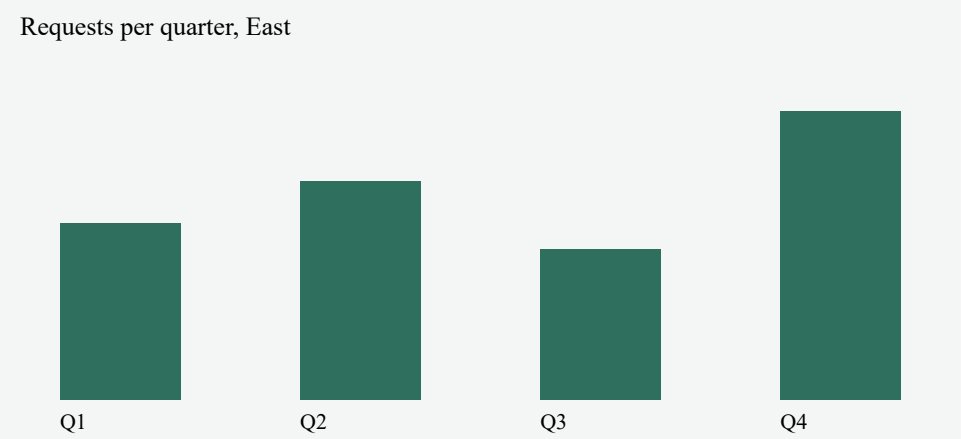

Figure 3. Requests per quarter, East region.

Table 3. Quarterly requests and median response time, East region

Quarter	Requests	Median response (hours)	Resolved on first contact
Q1	550	5	69%
Q2	680	5	90%
Q3	470	8	73%
Q4	900	17	64%

> See the methodology for how requests were counted, and the public guidance at W3C WCAG overview.

Region West

West: topic 1 — service quality

In the west region the service desk handled requests across the year. Paragraph 1 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the west region the service desk handled requests across the year. Paragraph 2 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the west region the service desk handled requests across the year. Paragraph 3 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

West: topic 2 — service quality

In the west region the service desk handled requests across the year. Paragraph 1 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the west region the service desk handled requests across the year. Paragraph 2 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the west region the service desk handled requests across the year. Paragraph 3 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

West: topic 3 — service quality

In the west region the service desk handled requests across the year. Paragraph 1 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the west region the service desk handled requests across the year. Paragraph 2 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the west region the service desk handled requests across the year. Paragraph 3 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

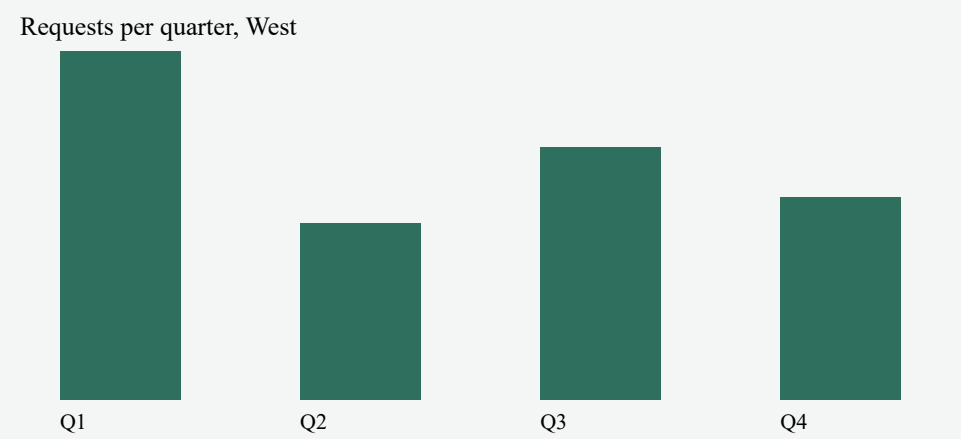

Figure 4. Requests per quarter, West region.

Table 4. Quarterly requests and median response time, West region

Quarter	Requests	Median response (hours)	Resolved on first contact
Q1	1090	7	92%
Q2	550	22	67%
Q3	790	15	61%
Q4	630	21	59%

> See the methodology for how requests were counted, and the public guidance at W3C WCAG overview.

Region Central

Central: topic 1 — service quality

In the central region the service desk handled requests across the year. Paragraph 1 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the central region the service desk handled requests across the year. Paragraph 2 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the central region the service desk handled requests across the year. Paragraph 3 of topic 1 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

Central: topic 2 — service quality

In the central region the service desk handled requests across the year. Paragraph 1 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the central region the service desk handled requests across the year. Paragraph 2 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the central region the service desk handled requests across the year. Paragraph 3 of topic 2 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

Central: topic 3 — service quality

In the central region the service desk handled requests across the year. Paragraph 1 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the central region the service desk handled requests across the year. Paragraph 2 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

In the central region the service desk handled requests across the year. Paragraph 3 of topic 3 describes how response times changed, which teams handled the most tickets, and how the backlog developed between the first and the fourth quarter. The figures below are illustrative and generated for this test.

- Opening hours stayed the same.
- Two new channels were added:
  - chat on the website;
  - a callback request form.
- The average first response dropped below one working day.

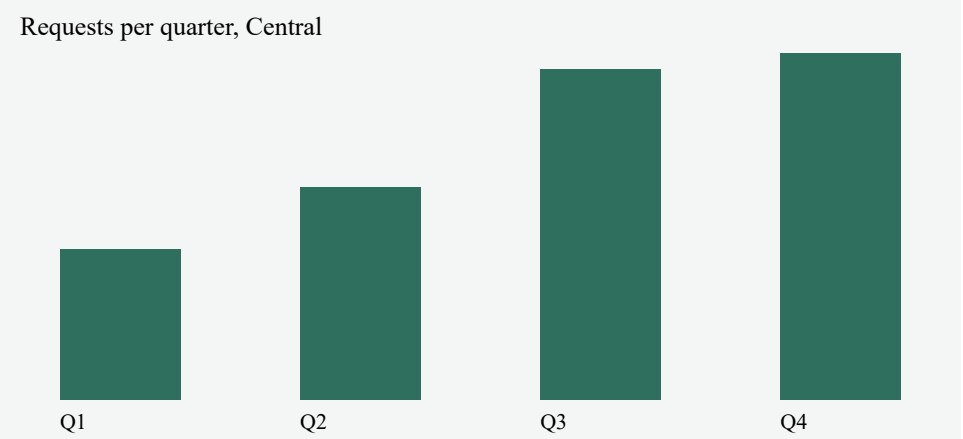

Figure 5. Requests per quarter, Central region.

Table 5. Quarterly requests and median response time, Central region

Quarter	Requests	Median response (hours)	Resolved on first contact
Q1	470	17	75%
Q2	660	18	92%
Q3	1030	18	78%
Q4	1080	13	70%

> See the methodology for how requests were counted, and the public guidance at W3C WCAG overview.

Methodology

Methodology paragraph 1. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

Methodology paragraph 2. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

Methodology paragraph 3. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

Methodology paragraph 4. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

Methodology paragraph 5. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

Methodology paragraph 6. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

Methodology paragraph 7. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

Methodology paragraph 8. Requests are counted once per case, reopened cases are not counted again, and response time is measured in working hours from the first message to the first human reply. Automated acknowledgements are excluded.

1. Collect the cases for the year.
2. Remove duplicates and spam.
3. Group by region and quarter.
4. Compute medians, not means, for response time.

Таблиця 6. Звернення за кварталами, усі регіони

Квартал	Звернення	Вирішено з першого контакту
К1	1868	82%
К2	1999	62%
К3	2676	69%
К4	2575	75%

- Графік роботи не змінювався.
- Додано чат на сайті.

Glossary

First contact resolution
: A case closed in the first human reply.

Median
: The middle value when all values are sorted.

Backlog
: Open cases at the end of a period.

Working hour
: An hour within published opening times.

Appendix: data tables

Table 7. Requests by region and quarter

Region	Q1	Q2	Q3	Q4
North	751	859	694	1023
South	474	520	924	828
East	568	750	555	900
West	831	440	1084	479
Central	971	986	721	748
